ENERGY POLICY phase 2: 2021-2024

Energy efficiency contributes to ArianeGroup's competitiveness and environmental impact.

To minimise our company's ecological footprint while ensuring optimum business performance, our Energy Policy is in line with our Sustainable Development Commitments (D-0040).

THIS ENERGY POLICY IS BASED ON TWO PILLARS:

- **Energy management**, with our Energy Performance System, an integral part of the Health, Safety & Environment (HSE) system.
- **Deployment of renewable energy sources** (biomass, solar/photovoltaic, etc.) under a realistic, controlled budgetary approach.

A PROCESS AND A TEAM HAVE BEEN PUT IN PLACE TO DRIVE THE ENERGY POLICY:

► PROCESS:

► TEAM:

Energy Managers oversee direction and consistency of the measures implemented, actively **supported by local on-site teams**: Facility Management energy representatives, personnel from MAIT (Manufacturing, Assembly, Integration and Test), operations / maintenance, IT, etc.

...AND YOU!

2021-2024 TARGETS

- **Reduction of our energy consumption:**
-10% under equivalent conditions* (-20% compared with 2017)
- **Doubling of renewable energy produced*** on our sites, to reach 14% of our energy consumption in 2024
- **Reduction in greenhouse gas emissions** linked to our on-site energy consumption:
-13% CO₂ equivalent in 2024* (-20% compared with 2017)

* Reference year 2019 and under comparable meteorological conditions and production levels

André-Hubert Roussel
